Organization

Parallel computers are either SIMD or MIMD.

- When there is only one control unit and all processors execute the same instruction in a synchronized fashion, the parallel machine is classified as SIMD.
- In a MIMD machine, each processor has its own control unit and can execute different instructions on different data.

MIMD Architecture

Shared Memory Organization

Parallel computers are either SIMD or MIMD.

- When there is only one control unit and all processors execute the same instruction in a synchronized fashion, the parallel machine is classified as SIMD.
- In a MIMD machine, each processor has its own control unit and can execute different instructions on different data.
- In the MISD category, the same stream of data flows through a linear array of processors executing different instruction streams. In practice, there is no viable MISD machine; however, some authors have considered pipelined machines as examples for MISD.
